```
let isRequesting = false;
let requestCount = 0;

const scrollHandler = function(event) {
  const DOM = event.target;
  if(hasScrolled(DOM) > 0.9 && !isRequesting) {
    isRequesting = true;
    fetch('url...')
    .then(res => {
      // do something change view
      isRequesting = false;
      requestCount = requestCount + 1;
      if (requestCount == 3) {
        scrollView.removeEventListener('scroll', scrollHandler)
      }
    })
  }
}
scrollView.addEventListener('scroll', scrollHandler);
```

我們一定要寫
這麼醜的程式碼嗎？
