

```
let isRequesting = false;

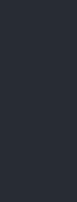

scrollView.addEventListener('scroll', event => {
  const DOM = event.target;
  if(hasScrolled(DOM) > 0.9 && !isRequesting) {
    isRequesting = true;
    fetch('url...')
      .then(res => {
        // do something change view
        isRequesting = false;
      });
  }
});
```

兩個銅銜過

## 兩個非同步行為

```
let isRequesting = false;

scrollView.addEventListener('scroll', event => {
  const DOM = event.target;
  if(hasScrolled(DOM) > 0.9 && !isRequesting) {
    isRequesting = true;
    fetch('url...')
      .then(res => {
        // do something change view
        isRequesting = false;
      });
  }
});
```

同樣是非同步行為  
卻用不同的 pattern

```
let isRequesting = false;

scrollView.addEventListener('scroll', event => {
  const DOM = event.target;
  if(hasScrolled(DOM) > 0.9 && !isRequesting) {
    isRequesting = true;
    fetch('url...')
      .then(res => {
        // do something change view
        isRequesting = false;
      });
  }
});
```
