

Assign 給變數

```
const scroll$ = Observable  
    .fromEvent(scrollView, 'scroll');
```

```
scroll$  
    .map(event => event.target)  
    .map(hasScrolled)  
    .filter(p => p > 0.9)  
    .exhaustMap(() => fetch('url...'))  
    .subscribe(res => {  
        // do something change view  
    });
```

抽取出 通用的 Operator

```
const scroll$ = Observable
    .fromEvent(scrollView, 'scroll');

scroll$
    .map(event => event.target)
    .map(hasScrolled)
    .filter(p => p > 0.9)
    .exhaustMap(() => fetch('url...'))
    .subscribe(res => {
        // do something change view
    });
```
