

```
const scrollOver = criticalP =>
  pipe(
    map(event => event.target),
    map(hasScroll),
    filter(p => p > criticalP)
  );
```

改用

lettable operator

```
import {map, filter} from 'rxjs/operators';
```

改用 lettable operator

```
import { map, filter } from 'rxjs/operators';

const scrollOver = criticalP =>
  pipe(
    map(event => event.target),
    map(hasScroll),
    filter(p => p > criticalP)
  );
```

原本的程式碼

```
import { scrollOverNinetyPercent } from '...';
import { getPostObservable } from 'xxx';

const scroll$ = Observable
    .fromEvent(scrollView, 'scroll');

scroll$
    .let(scrollOverNinetyPercent)
    .exhaustMap(getPostObservable)
    .subscribe(res => {
        // do something change view
    });
```
