

改用 pipe 組合

operator

```
import { scrollOver } from '...';
import { getPostObservable } from 'xxx';

const scroll$ = Observable
    .fromEvent(scrollView, 'scroll');

scroll$
    .pipe(
        scrollOver(0.9),
        exhaustMap(getPostObservable)
    )
    .subscribe(res => {
        // do something change view
    });
```

```
import { scrollOver } from '...';
import { getPostObservable } from 'xxx';
import { exhaustMap } from 'rxjs/operators';

const scroll$ = Observable
    .fromEvent(scrollView, 'scroll');

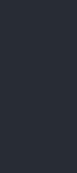

scroll$
    .pipe(
        scrollOver(0.9),
        exhaustMap(getPostObservable)
    )
    .subscribe(res => {
        // do something change view
    });
```

## 改用 **pipe** 組合 operator

```
import { scrollOver } from '...';
import { getPostObservable } from 'xxx';
import { exhaustMap } from 'rxjs/operators';

const scroll$ = Observable
    .fromEvent(scrollView, 'scroll');

scroll$
    .pipe(
        scrollOver(0.9),
        exhaustMap(getPostObservable)
    )
    .subscribe(res => {
        // do something change view
    });
```

## 取得文章

```
const getPostObservable = () =>  
  Observable.ajax('url...');
```
