```javascript
it('interval', () => {
  const actual = Observable.interval(10, testScheduler)
                           .take(3)
                           .map(x => x + 1)
                           .filter(x => x % 2 === 1);

  testScheduler.expectObservable(actual)
               .toBe('-a-(b|)', { a: 1, b: 3 });
});
```
