```
Observable.fromEvent(scrollView, 'scroll')
  .map(event => event.target)
  .map(hasScrolled)
  .filter(p => p > 0.9)
  .exhaustMap(() => fetch('url...'))
  .subscribe(res => {
    // do something change view
  });
```

抽取有意義的
Observable

```
.exhaustMap(() => fetch('url...'))
```

```
// do something change view
```

```
.map(event => event.target)
```

```
.fromEvent(scrollView, 'scroll')
```

```
.subscribe(res => {
```

```
.filter(p => p > 0.9)
```

`.map(hasScrolled)`

```
const scroll$ =
```

scroll$
